

INTELLIGENT BUSINESS PROCESS AUTOMATION

for M365, Teams, and SharePoint

Our NITRO Studio combines Business Process Automation with Artificial Intelligence to deliver powerful solutions for your organization. We call this iBPA – Intelligent Business Process Automation.

BPA + AI = iBPA

These capabilities help you take your organization to a new level. With improved workflows and automation, your company can run much more efficiently and profitably.

AI-GENERATED EMAILS

Your staff can save substantial time using emails generated by ChatGPT. Emails can be modified as needed by staff, but most of the work is already done by the AI.

This makes your staff more efficient and able to focus on important and consequential tasks rather than tedious, repetitive ones.

AI-POWERED KNOWLEDGE BASE

We use ChatGPT along with your enterprise data to provide a unique solution ideally suited for your organization. Users can get the answers they need quickly & efficiently at any time of day without staff intervention.

NITRO FORMS GENERATOR

Using simple prompts, the NITRO Studio forms generator can create forms that are specific to your organization. It can also convert InfoPath, Power Apps, Access Forms, and others to the NITRO format.

AI-POWERED WORKFLOWS

AI-based, contextual workflows optimize business processes, reducing staff time spent on routine tasks. Auto-routing, auto-responses, escalations, database integrations, approvals, and much more can use AI to significantly speed up processing.
